

**ISOLATES SOW AND LITTER
IN CONTROLLED CLIMATE**

New Farrowing Huts are Plush, Private

"Central farrowing isn't all it's cracked up to be. It's like putting all hospital patients in one big room," says David Arends, designer and developer of a new-style farrowing hut that puts each sow and her litter in plush, private and climate controlled quarters.

Arends, president of Ne-Pro-Tect-Corp., Luverne, Minn., believes the big advantage of the company's new farrowing hut is disease control. "If there's a disease outbreak, you stand a good chance of being able to keep it isolated to one or a few sows or litters."

For hog producers already set up for central farrowing, Arends believes the new-style farrowing huts — because they're fully insulated for year-around comfort — will be attractive as an "overflow" facility — a place to put sows when there's no room in the farrowing house, or a place to isolate a sow for special treatment or attention.

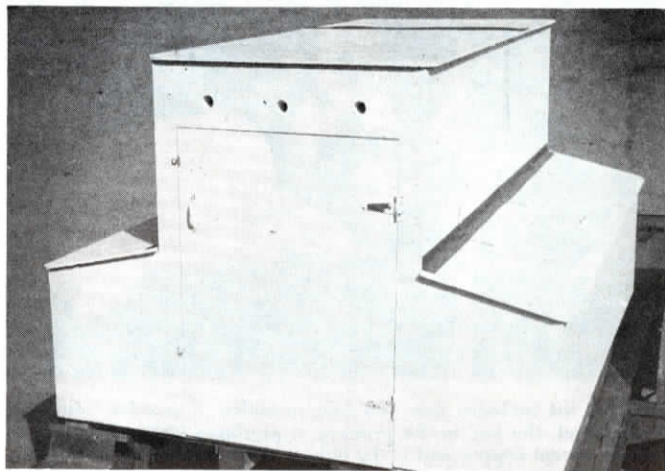

"In designing the hut, we took a

well-designed and well-built steel farrowing crate and built a building around it," says Arends. Key features include: Heated fiberglass flooring, total steel slats; feeder; automatic waterer; 2 in. foam insulation; front and back doors; ventilator fan and thermostats. The insulated side doors tilt up for easy access to the pigs, and for easy cleaning and disinfecting of the facility.

Another advantage, of particular importance to hog producers bothered by allergies, is that you can feed and care for the sow and her litter without exposure to hog dust. A fan, coupled with 2-in. insulation, provides "climate controlled" comfort in hot weather. In winter, a supplemental heater kicks in as needed to maintain a preset temperature.

Individual huts sell for \$800.

Inside dimensions of the climate controlled Little Sambo farrowing hut are 5 ft. wide, 6.5 ft. long and 4 ft. high. Side doors lift up for easy access to small pigs.

Electric Handi-Pump plugs into cigarette lighter for out-of-gas emergencies, or for fast filling of lawnmowers, snowmobiles and other small engines. Pumps 2 qts. per min.

CARRY IT IN YOUR TRUCK OR PICKUP

Slick Way to Siphon Gas

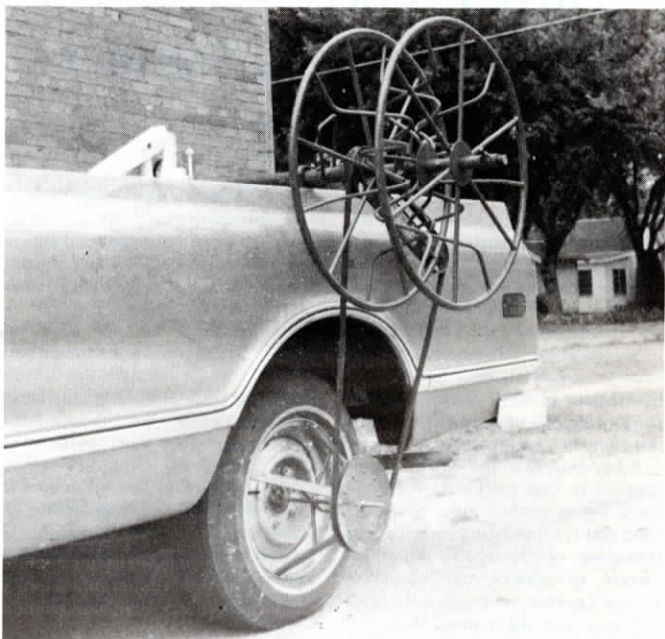

New from Facet Enterprises is an electric pump so small it fits into the palm of your hand, yet powerful enough to pump 2 qts. of gas per minute.

This slick way to siphon gas for emergency or other uses plugs into the cigarette lighter of your car, pickup or truck. Comes with an 18ft. cord, 10ft. of flexible plastic hose, a cigarette lighter plug-in and an on-off switch.

In out-of-gas emergencies, the Handi-Pump can be used to pump

fuel from one vehicle to the next. Or, it can be used to fill small engines — such as a snowblower, snowmobile or lawnmower — directly from the vehicle's tank, thus eliminating dangerous hand-pouring or siphoning by mouth.

Retails for \$19.95. For more details, contact: FARM SHOW Followup, Facet Enterprises, Elmira, N.Y. 14903 (ph. 607 737-8011).

Wheel drive for the Dudley wire roller mounts on the hub without having to jack up the wheel. Spool takes up mile of smooth wire, 100 rods of barbed wire.

HANDLES SMOOTH OR BARBED WIRE

Roll Wire with Your Pickup

You can roll or unroll wire at speeds up to 20 mph using your pickup and the new Dudley wire roller.

Designed to fit any pickup, it sets in the stake holes and is easily mounted or dismounted in a few minutes by one man. The spool will take up 100 rods of barbed wire, or up to a mile of smooth wire.

After rolling up a spool of wire, just tie a wire or two around the roll, remove the outside reel, then slip the roll off and replace the reel and you're ready to roll again. To unroll, just reverse the action.

The drive belt is on a spring tension idler which allows the belt to slip slightly to compensate for different size rolls. The Dudley roller can be installed on a trailer and pulled with a tractor on land too rough for a pickup. Sells for \$115.
