"It works great for stripping twine off big round bales," says Allen Schwitzer about his "Twine Stripper" which fits inside a front-end loader bucket. Powered drum is driven by two orbit motors. When pressed against the side of a bale, the drum strips twine off and wraps it up.

IT TAKES THE WORK OUT OF FEEDING BALES

Twine Stripper Makes Bale Handling Easier

By Mark Newhall, Editor

"We think it's the best piece of equipment for handling big round bales that has ever been built," says Allen Schwitzer, Melville, Sask., who built what he calls a "Twine Stripper" to fit a front-end loader bucket.

One of the biggest problems with feeding big round bales is getting the twine off, says Schwitzer, especially if you've got a lot of cattle to feed. After years of continually climbing on and off the tractor to cut off twine by hand, he finally came up with a machine to do the job that works so well he brought it to the recent Farm Progress Show in Regina, Sask.

(Continued on next page)

Cutting blades drop down against drum as needed to effortlessly remove the rolled-up twine.
