

Mower's telescoping arm reaches out to mow under and around fences, posts, trees and other obstacles.

ITS "THREE-HEADED" AND ROTATES AROUND POSTS, TREE TRUNKS

"Cloverleaf" Mower Reaches Under Fences

"It mows under and around nearly any obstacle on the farm," says Frank Brendis about his new Row Mow "cloverleaf" mower with a unique three-headed mower deck that rotates 360°.

The cloverleaf deck mounts on a telescoping arm that reaches out as far as 5 3/4 ft. to the side. The three 24-in. dia. belt-driven mower decks cluster around a central gearbox. As the mower deck pivots around obstacles, the single drive belt - that drives all three blades at once - simply slips around the drive pulley.

The mower arm flexes up and down 30° for mowing ditches and slopes. It requires a 16 to 50 hp. tractor with a Cat I or II 3-pt. and a 540 pto. Cutting height can be adjusted from 1 1/2 to 4 in. in height. The mower deck rides on three "anti-scalp" rollers. Because the mower decks are arranged proportionally, cutting width remains at a constant 48 in. no matter how the decks are turned.

Sells for \$2,495.

For more information, contact: FARM SHOW Followup, Row Mow, Equine Services Inc., Rt. 1, Box 225, Wynnewood, Okla. 73098 (ph 405 665-2300).

"Row Mow's" three-headed deck rotates 360° to work its way around obstacles.

Metal teeth clamped to lengths of 7/8-in. dia. steel cable cut and rake out weeds.

KNIVES MOUNT ON 7/8-IN. STEEL CABLE

First-Of-Its-Kind "Cable" Tree Weeder

"It does a fantastic job weeding around and between trees in shelterbelts and orchards as well as around fences and vineyards," says Paul Bezzerides, manufacturer of a new cable tree weeder that uses knives mounted on the ends of lengths of 7/8-in. dia. steel cable to cut and rake out weeds.

The cable weeders mount on 5-ft. dia. ground-driven wheels carried by a hydraulically controlled frame. The fully-adjustable weeder wheels are positioned at a slant to the ground, the angle of which can be changed to adapt to the size of the berm under the trees or fence. The carrying frame moves the entire wheel assemblies in or out as needed to weed two rows of trees at once.

Each weed-weeding cable end is fitted with two metal teeth. One digs into the ground, pulling the wheel around and the other - mounted about 4 in. from the end of

the cable - is a cutter tooth that slices through weeds.

Bezzerides, who also manufactures the Spring Hoe Weeder for controlling weeds in row crops, says the flexible cable on the new tree weeder works its way around the base of trees without causing damage. "It even weeds around plastic drip hose with no problem. Cable ends bend and flex easily and yet they're strong enough to last for years with minimum wear," says Bezzerides.

The two-wheel rig mounts on a tractor 3-pt. and sells for \$7,500. Can also be adapted to run on the front of tractor.

For more information, contact: FARM SHOW Followup, Bezzerides Brothers, 14142 Ave. 416, P.O. Box 211, Orosi, Calif. 93647 (ph 209 528-3011).

Tractor-Towing Trailer

"This cart lets me pull a tractor behind my pickup," says Alan Pegram, Lincoln, Ill.

"The cart was made from an old combine axle and a wagon hoist cradle. Front wheels of the tractor, whether wide front or row crop, rest in the cradle and a chain and load binder around the front main frame holds the tractor in

place. The tow-cart has a removable lock on the steering. When towing it empty, the lock is in place and it tows as a trailer. When loaded, the lock is removed and it self-steers like a wagon. Works great."
