

Old Fashioned Charm For Modern Bathrooms

Old fashioned charm combines with modern engineering in the new pull chain water closet from Wellslake Industries.

"It's one of the most popular home furnishing products we've ever sold," says Wally Lindgren, president of Midwest Group, Eden Prairie, Minn., distributor.

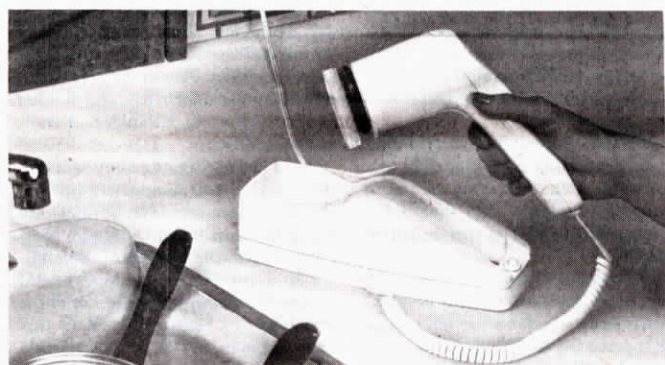

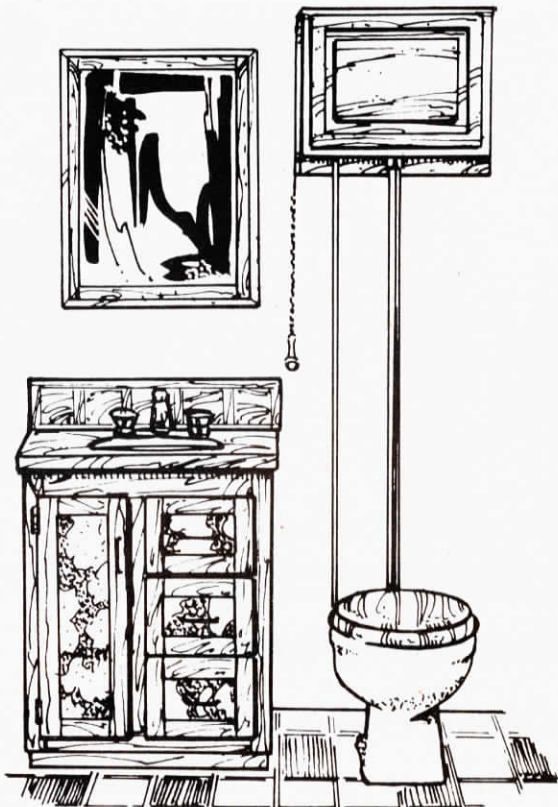

The solid-oak tank, hand finished in the tradition of fine furniture, is insulated to avoid sweating. Solid brass pipes continue the decorative quality, and the elongated, siphon-jet bowl is quiet and sanitary. Both the tank and bowl are designed to save water.

Complimenting the water closet is an elongated solid oak seat with polished brass hinge. Solid oak framing sets off an ornate, matching wall mirror. Rounding out the "old fashioned charm" of this unique bathroom suite is a hand-rubbed oak vanity. Raised panel drawers and

oak front doors give it a distinctive look. Also available is a just-introduced pedestal type sink. All the pieces are available in a matched set, or you can buy them separately.

Here's another "touch of class" you can add to really make the bathroom's decor distinctly different: You can have keepsake items, such as photos, old coins, rings, stamps, dried flowers, concert ticket stubs or personal mementoes encased in clear acrylic. The piece, with the mementoes enclosed, can be made as the vanity counter top, or as the lid of the toilet seat. You decide what type of items you would like to have encased in the clear acrylic, and the company will tell you if the material is acceptable for encasing, what it will cost, etc.

For more details, contact: FARM SHOW Followup, The Midwest Group, 14619 Martin Drive, Eden Prairie, Mn. 55344 (ph. 612 937-9397).

New Potscrubber can be suspended on the wall like a telephone.

COMPLETELY IMMERSIBLE IN WATER

"Potscrubber" Cleans Dirty Pots, Pans

"No need to ever again face the drudgery of cleaning up dirty pots and pans. Potscrubber will do it for you," says H and S Distributors about the new electric hand-held scouring device that's completely immersible in water without danger of electrical shock. It can be fitted with interchangeable scouring pads to scrub everything from fine enamel and teflon to ovens and grills. Works with all scouring powders, liquids, and detergents.

Potscrubber plugs into a standard electrical outlet and transforms the current down to 12 volts. The airtight and watertight cord and appliance

are waiting for approval of Underwriters' Laboratories, but says the manufacturer, this approval "is only a matter of time."

The electric scrubber retails for \$39.95 and is being sold nationwide by various mail order houses. The manufacturer expects it to be marketed soon by several large chain stores.

If you cannot find it for sale in your local stores, or your mail order catalogs, contact: FARM SHOW Followup, H and S Distributors, 2621 Pico Blvd., Unit K, Santa Monica, Calif. 90405 (ph 213 828-1590).

KEROSENE AND LP-FIRED MODELS AVAILABLE

Refrigerator-Freezer Cools Food With Fire

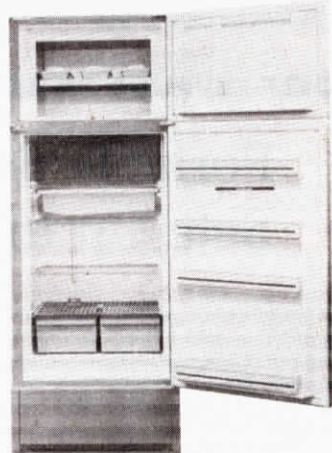

In remote areas and in buildings not wired for electricity, there's nothing else that does the job, says Max Robinson, representative of the Dometic Sales Corp., about his company's kerosene and LP-fueled refrigerator-freezers.

Model RAK 100 refrigerator-freezer, with 3.7 gal. kerosene storage capacity, is 24 in. square and 64 in. high. It features 2.5 sq. ft. of freezer space and a fresh food compartment. Robinson says a full 3.7 gal. of fuel will operate the refrigerator for about three weeks under normal conditions. The LP-fired unit runs off any LP source.

The fuel-fired cooling units are operated on the principle of absorption, which means the flame is used to heat a mixture of hydrogen and ammonia. The ammonia evaporates and runs through coils, absorbing heat from inside the refrigerator.

Dometic also has a line of kerosene and LP-gas chest-type freezers. Like the refrigerators, they compare favorably to conventional electric units, with all standard features and temperature controls.

Refrigerator-freezers retail at about \$700, and chest-type freezers at \$800.

Kerosene or LP-fueled Dometic refrigerator-freezers are completely silent, and have no moving parts to wear out. Doors are reversible to swing right or left.
