

## Fence Row Mowing Made Easy

**FM 60 Fence Mower**

**Fence line before cutting**

**Fence line after cutting**

The Fence Mower is a heavily-constructed tractor implement that mows under fence lines and maneuvers around fence posts as the operator drives parallel to the fence row.

There are 3 models to choose from depending on tractor size. All models use a metal blade for the cutting and the technology now offers a choice of blades that handle the toughest jobs in cutting down saplings up to 1 1/2 in. in dia. With the dirt removal attachment added to the blade you can level out the ridge line of dirt directly under the fence lines where livestock or Mother Nature has built up dirt directly under the fence.

"We now have over 500 units in operation throughout 44 states and Canada, and continuous feedback from customers has been excellent," says Larry Wright, inventor and president of the company.

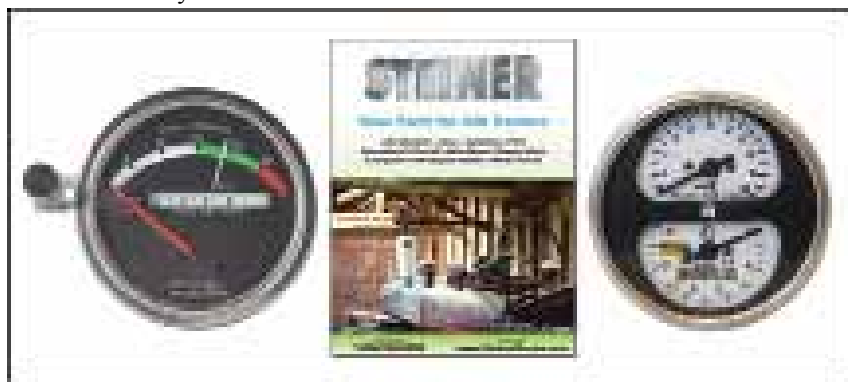

The company sells and ships direct to the customer with most of the orders coming in from its website: [www.fencemower.com](http://www.fencemower.com).

## IH "Disgusted" Shift Kits

"If your older IH tractor sometimes slips out of gear or does not go into gear, or if you're just frustrated with the way it shifts, we can probably help," says Otto Wenz of Wenz Service, Inc. "We had some of the same problems with our own tractor and figured out a way to fix it that worked better than anything we could find.

"We now offer complete kits to solve shifting problems for IH models from the 706 up to the 6788. Most of the problems with these tractors come from the gears in the transmission not being fully engaged. Different tractors need different parts, so while we do have complete repair kits, we'd prefer to sell only the parts needed. For this reason, farmers or their mechanics should call for parts and prices.

"All of our transmission repair parts are guaranteed. We guarantee the '06 series parts for the life of our business. Kits for most other models come with a 10 year guarantee. We've sold more than 5,000 kits in our nearly 31 years in business. The cost of repairs with our kits are usually less than half the cost of using parts from Case IH.

"In addition to IH transmission repair parts, we also sell a number of new after-market parts for almost any make of tractor. Our parts cost a lot less than most places for most brands. We usually can analyze the problem over the phone, so that you can make an informed decision. We ship all over the world."
