

Collapsed closing wheel, left, is replaced by May Wes wheel, right.

Wheels come in 10 or 12-in. dia., fitted with a 5/8-in. bearing.

A New Solution To Broken Closing Wheels On No-Till Drills

One South Dakota customer seeds 4,000 plus acres every spring. He used to replace up to 10 closing wheels per day. With the help of May Wes, he replaced all the original OEM wheels with the new May Wes UHMW solid closing wheels.

May Wes has a history of finding innovative solutions to help farmers solve problems in the field. The company recently introduced a new long-running solid UHMW replacement closing wheel for no-till drills such as the Case IH SDX30 and SDX40.

The wheel is made of solid molded UHMW poly which is tougher than the original plastic/rubber wheels. They also stay cleaner in adverse conditions due to the non-stick poly surface.

The wheels come in either 10 or 12-in. diameter and have the common 5/8-in. closing wheel bearing - same as the OEM wheels.

The wheels are already in use on a number of drills across the country.

UHMW Poly Skid Shoes

Now available for ALL Case 2020 & New Holland 74C flex heads

May Wes Mfg., Hutchinson, Minn., has just introduced its UHMW Poly Skid Shoes for the Case 2020 and New Holland 74C flex heads. After the OEM manufacturer went through 4 different serial break numbers for both Case and New Holland heads, May Wes was the first to develop 4 different kits for each of the serial break numbers, adding them to the company's full line up of poly skid shoes.

May Wes has followed the mergers and acquisitions of agricultural equipment companies closely to provide OEM replacement skid shoes for most brands and models of combine heads. In the May Wes catalog you will find 28 pages of poly skid shoes for combine heads to swathers to cotton pickers for Hart Carter, Massey, AGCO, John Deere, Case New Holland and more.

May Wes Poly Skid Shoes are made of UHMW polyethylene for its unique properties – tough, lightweight, durable, slick and quiet. Only specially-formulated virgin UHMW poly is used to make May Wes Skid Shoes. Unlike some skid shoes, no reground materials are used that could weaken the molecular strength or compromise the other properties of the shoes. May Wes says they will outlast, outperform and outwear most skid shoes on the market. They let you run your head closer to the ground without pushing and piling soil and debris and you will put more beans in the combine even in wet sticky conditions.
