

## “THE KEY TO DIRECT CUT HARVESTING”

# Add-On Air Reel Ideal For Cutting Soybeans, Specialty Crops

AWS (Advanced Wind-reel Systems) is an attachment for agricultural combines designed to improve the efficiency and productivity operation of direct cut harvesting in lentils, peas, dry beans, soybeans, cereal grains and other specialty crops.

The AWS system applies a continuous flow of high velocity air to the crop as it is cut, providing an even feed of material into the combine with less crop damage. Consistent feeding allows operation of the combine at full capacity with increased ground speed, better separation and more even residue distribution. The curtain of air sweeps the crop from the knife, reducing shatter loss, enhancing knife performance and greatly increasing yield potential.

AWS systems feature a trouble-free belt-driven fan system and the out front AWS manifold eliminates the need to replace your factory reel. Systems are available for all makes of combines.

**Reader Inquiry No.12**

**AWS air reels are available to fit all makes of combine headers. The curtain of air created by the manifold system across the front of the header provides an even flow of crop material into the combine with less damage.**

## Cutting Discs Replace Blades On Any Mower

The blades on most any mower can be replaced with the revolutionary new Meg-Mo System, which consists of a central steel disc with four “fold-back” cutting blades attached.

Invented 20 years ago by Roy Megli of Megli Lawn Care in Sterling, Ill., sales are booming for the Meg-Mo Systems. Even lawn mower manufacturers are taking a look at the new design. The Meg-Mo System was developed to eliminate the time and expense needed to maintain conventional mower blades.

“With conventional single blades, when the blade wears out you have to replace the whole blade,” notes Megli. “With my design, you keep the disk and replace only the knives, which last considerably longer than conventional blades.”

The Meg-Mo System also mows faster, wet or dry, and cuts mowing time, notes Megli. “They mulch without changing blades, and increase spindle life. The main reason the system will last so much longer

than a conventional blade is the fold-back mechanism, which avoids damage to the cutting knives.

The Meg-Mo System will fit most any model or size. Installation is easy as well. Simply remove the original blades on your mower and replace with the cutting disks.

Pricing for each system, according to blade size, starts at \$59.95 plus \$7 shipping each. You will

need a blade system for each blade you have. Replacement knives are \$4.95 each.

For more information or to place an order, visit the Meg-Mo System website at [www.meg-mo.com](http://www.meg-mo.com) or contact: FARM SHOW
