

ATV-Pulled Chisel Plow

“There’s nothing else on the market like it,” says Kunz about the company’s new ATV-pulled chisel plow.

“It can dig up to 6 in. deep, even in hard ground. It’s very aggressive,” says Kunz.

The Till-Ease is a 43-in. wide chisel plow/field cultivator designed to be pulled behind any 4-WD ATV or other small towing vehicle. It has a row of 13 1/2-in. dia. coulters on front and five rigid shanks on back arranged in a V-shaped pattern.

The shanks slip into a receiver tube and can be quickly removed by simply removing a pin. The shanks can be equipped with either chisel points or 9-in. wide sweeps. An optional drag harrow for final seedbed preparation pins into receivers on back of the tool’s frame.

The implement is raised and lowered by an electric-operated, linear screw actuator.

AcrEase Mowers

“The AcrEase Mowers are available in both rough cut and finish cut styles. So whether you have a neglected pasture, narrow trail, or a yard like a golf course, the AcrEase can meet the challenge. They are also capable of being pulled directly behind or fully offset to the left or right,” says Matt Kunz of Kunz Engineering.

The AcrEase Finish Cut models can be attached to the side of riding mowers, zero turn mowers and small tractors to add on additional cutting width and drastically

reduce mowing time. The AcrEase can also be pulled individually or in tandem behind ATVs and utility vehicles. The heavy duty, high capacity 40" and 60" models come with electric start engines ranging from 12.5-23hp. Both commercial and noncommercial grade engines are available. The AcrEase Finish Cut mowers are extremely maneuverable, easy to pull and stable on steep banks. They are also capable of mowing at today’s standards in high speed mowing.

MAKE YOUR OWN COMPOST!

ECHO Bear Cat Chipper/Shredders

1

Clean Up Your Property
Put branches, twigs, and leaves into a debris pile. Using the Chipper/Shredder saves time on decomposition.

2

Chip and Shred the Debris
Powerful and easy to maneuver.

3

Reap the Benefits
All natural leaf compost is essential for a successful garden compost pile. Freshly shredded leaves can be used as mulch on planting beds and around trees and shrubs.
