

# Introducing “Tractor Guard”

## New Farm Innovation Now Available

Glass breakage in agriculture and the construction industry is a major problem, often leading to unexpected expense and down time in replacing glass.

Now there is a simple, cost-effective solution - Tractor Guard! Launched for the first time by U. S. Farm Innovations, Tractor Guard provides an affordable, durable and hassle-free solution to virtually eliminate broken windows on farm and construction equipment. Having won the Farmers’ Guardian LAMMA 2012 first place award for the most innovative farm invention, (UK’s leading farm machinery equipment and services show), patented Tractor Guards are made of clear poly-carbonate similar to police riot shields according to Lyle Silbernagel, owner of U. S. Farm Innovations, the exclusive North America distributor. Tractor Guards are 200 times more impact resistant than glass and are weather and UV-protected. These Tractor Guards can be installed and removed in two minutes. They are custom-fitted to any make and model of tractor, farm equipment, skid steers,

During tests on a pair of Deere 7750 tractors, one tractor’s air filter was cleaned once a day. Nearly 5 lbs. of dirt was removed daily and the tractor used 58 gal. less fuel per day than the tractor with the dirty filter.

## The Original Air Filter Blaster With Its “One Day Payback” Technology

The Air Filter Blaster uses low pressure and constant motion to safely, effectively, and efficiently clean canister style air filters.

“The Air Filter Blaster is designed to clean dirt from any canister-type air filter,” says Dennis Grieve, Salmon River Innovations, Inc president. “It lets you use your air compressor to safely blow dust out of the filter. It’s not intended to permanently replace the purchase of new air filters. It’ll just make them last as much as 20 times longer.”

The portable unit comes with a stepped cone-shaped lid pressurizes the filter from the inside out. To clean a filter, you hook

up a compressor to the supplied ball valve and open the valve. The pressurized air creates a vortex inside the rotor head which causes high-speed rotation of the head. As the head rotates inside the filter element, air is directed out of 4 specifically designed directional air jackets cleaning the filter from the very bottom to the very top of the filter in a matter of seconds.

“It has just has one moving part and since that part uses air ride bearing technology, it should last a lifetime,” says Grieve.

“The true science is by design, the filter can be cleaned several times due to the fact that at no time will more than 40-48 PSI be

applied to element. It works a lot better than damaging the filter by banging it on the ground or holding an air nozzle 1/4-in. away from the filter with high pressure, which can tear the element.”

The Air Filter Blaster portable unit sells for \$349 plus S&H and comes with a 6-in. rotor head standard - 3, 4 1/2 and 9-in. rotor heads are also available to fit almost any filter on the market and sell for \$59 each.
