

Free Hot Water

Energy conscious dairymen can save water heating expense by capturing free heat from their milking machine pump with the new Vaccar Heat Exchanger. It's reportedly the first such unit on the market designed to work off milking machine vacuum pumps rather than milk coolers.

Cold water is circulated around a series of tubes through which hot exhaust air is passed, providing warm water for washing udders, or equip-

ment and milkhouse clean up.

A supply tank, circulating pump, thermostat and solenoid valve are included to regulate flow and provide rapid heating of water soon after the vacuum pump is started. The Vaccar Heat Exchanger sells for approximately \$320 in England.

For more information, contact: FARM SHOW Followup, Vaccar Limited, Southern Ave., Leominster, Herefordshire, England.

Tipping Trailers

Farmers throughout England and Europe are switching to tipping trailers to haul grain, silage and other bulk materials.

The popular Salop line of trailers features a tapered body for easy unloading, rigid steel sides, rubber-sealer automatic opening and closing rear endgates, built-in safety prop for use when the bed is raised, single or twin hydraulic lift cylinders and heavy duty jack. Tandem axles on 9 and 14 ton models provide flotation and smooth operation over uneven ground. Single axles are provided on 5 and 6.5 ton trailers.

Approximate cubic capacity, level with the top of the sides on the basic

trailer, are as follows: 5 ton model — 215 cu. ft.; 6.5 ton — 292 cu. ft.; 9 ton — 390 cu. ft.; and 14 ton trailer — 630 cubic feet.

Prices for these trailers in England start at approximately \$1800 for the 5 ton model without lights, brakes or other special equipment. Optional features include a grain spout for the rear gate, silage sides for front or side loading, brakes, lights and mud flaps.

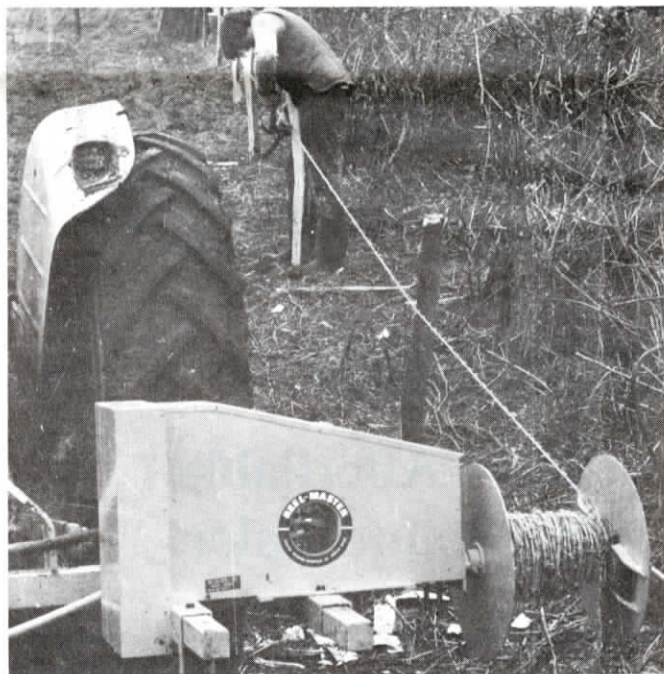

The manufacturer is interested in U.S. distribution. For more details, contact: FARM SHOW Followup, Salop Trailer Company Ltd., Monkmoor Road, Shrewsbury, England SY2 5 TJ.

New-Style Wire Winder

You can roll or unroll barbed wire, woven or electric fence wire, plastic pipe, or polyethylene sheets used in truck gardening with the new Pepler Hydraulic Reelmaster. It attaches to any 3-pt. hitch and uses the tractor's hydraulic system for controlling speed of winding or unwinding wire and other flexible materials. It can also be used to stretch wire as it's unrolled and fastened to posts.

Reel speed can be adjusted to

match tractor travel speed at any rate up to 3 or 3½ mph. Tension is adjusted by setting the hydraulic control valve. Different size spools are available for different materials, or you can easily make your own from plywood and other readily available materials.

For prices and additional information, contact: FARM SHOW Followup, S. Pepler & Sons, Newchurch, Sandown, Isle of Wight, England.
