Making Hay With Home-Built Tractors

High-Speed Raking Tractor - "I can rake up to 20 acres per hour traveling at 15 mph," says the farmer who built this low-to-the-ground raking tractor out of a combination of old car and tractor parts.

Round Bale Handler - Self-propelled bale hauler can handle four bales at a time, each mounted on independently controlled bale spears that tip up and down. Operator platform swivels 180° to make loading rear-mounted bales easy.
