

How to Turn Fallow Land Into a Profit Center

With high taxation, increasing costs, falling profit margins, and loss of productive farmland, farmers are facing an increasingly uncertain future.

Whether it's through depleted soil or land that's too expensive to farm, your unused acreage is taking money out of your pocket.

World Tree offers a solution to these problems with a crop that is safe, economical, self-renewing, ecologically sound and highly profitable.

We Have 1 Million Trees To Give Away

We are looking for farmers to help us plant over a million Empress Splendor trees in the next 5 years.

We provide the trees, you provide the land and together we share the profits. Since one acre of Empress trees yields a potential \$90,000 of lumber in just 10 years, the future rewards are substantial.

These trees are being grown as part of the World Tree Carbon Offset Program. The program exists to provide financial security and offset the carbon footprint for thousands of individuals, families and businesses around the world.

World Tree is looking for qualified farmers to grow these trees on our behalf. When the trees reach maturity, the profit is then split with you, the grower.

We will also provide instructional material, training, and support free-of-charge to our qualifying growers.

We Are Looking for Farmers

If you have at least 20 acres of available land in zones 7-11 and are looking for a highly profitable crop, with minimal financial investment, then we want to hear from you.

About the Empress Splendor Tree

- World's fastest growing hardwood tree.
- A mature harvestable tree in 10 years.
- Regenerates without replanting up to 7 times.
- Beautiful, lightweight hardwood worth \$3-14/board foot.
- As much as 294 board feet per tree.
- 6 x ROI per acre compared to Pine.
- Drought-resistant, low water usage.
- Suitable for intercropping.
- Natural ground fertilizer.
- Naturally fire-retardant.
- Non-invasive.
- Edible blossoms that are great for honey production.

What You Need

- Minimum 20 acres of available land
- Hardiness zone 7-11
- Sandy loam soil
