

Increase Yield And Decrease Shatter Loss With A Crary Air Reel Or Wind System!

Air Reel

The Crary Air Reel can replace your factory reel. This will give you a constant stream of high velocity air to keep crop running through your machine to help reduce shatter loss and eliminate bunching. On average you can increase your harvest by 1 to 4 bushels per acre just by adding a Crary Air Reel to your header.

Crary Wind System (CWS)

You can still get the benefits of adding air to your header without having to replace your existing reel by installing a Crary Wind System. The CWS fits most auger and draper heads and is easy to install. Like the Crary Air Reel you will receive the same benefits of reduced shatter loss, less bunching and an increase of 1 to 4 bushels per acre with the CWS.

“Big Top” Grain Tank Extension

The best way to increase combine capacity without trading up to a bigger machine is with the Big Top Combine Hopper Extension. It adds up to 60% more volume to your machine. Crary is now adding capacity to some Power Fold option combines like the CIH 8240/9240, and both the JDS660/S670, and S680/S690. More Coming in 2017!
