Close furrows with the 1125 furrow closing system. The 1125 furrow closing system is designed for furrow closing on 1125, 1245 or 1345 planters.

2x2 Fertilizer Tube for Case IH

Schaffert today's new 2x2 fertilizer tube is designed to inject fertilizer directly into the Case IH planter unit.

This fertilizer tube injects fertilizer directly into the Case IH planter unit. The tube places fertilizer precisely where you need it - in a 2x2 pattern, giving crops easy access to the nutrients needed for optimal growth.

The fertilizer is incorporated into the soil, so it will not splash on the planter, covering discs, or press wheels. This keeps fertilizer from building up on the press wheels.

The tube's formed compact design allows it to run close to the soil surface. This helps

eliminate the clogging of tubes and the splashing of fertilizer.

Right and left are available. The 2x2 tube also comes with the option to add high pressure tips.

Schaffert Mfg. Co., 71499 Rd. 397, Indiana, IN 47604; www.schaffert.com; 800-834-9665 or 309-364-2600.
