

During tests on a pair of Deere 7750 tractors, one tractor's air filter was cleaned once a day. Nearly 5 lbs. of dirt was removed daily and the tractor used 58 gal. less fuel per day than the tractor with the dirty filter.

## The Original Air Filter Blaster With Its "One Day Payback" Technology

The Air Filter Blaster uses low pressure and constant motion to safely, effectively, and efficiently clean canister style air filters.

"The Air Filter Blaster is designed to clean dirt from any canister-type air filter," says Dennis Grieve, Salmon River Innovations, Inc president. "It lets you use your air compressor to safely blow dust out of the filter. It's not intended to permanently replace the purchase of new air filters. It'll just make them last as much as 20 times longer."

The portable unit comes with a stepped cone-shaped lid that pressurizes the filter from the inside out. To clean a filter, you

hook up a compressor to the supplied ball valve and open the valve. The pressurized air creates a vortex inside the rotor head which causes high-speed rotation of the head. As the head rotates inside the filter element, air is directed out of 4 specifically designed directional air jackets cleaning the filter from the very bottom to the very top of the filter in a matter of seconds.

"It has just has one moving part and since that part uses air ride bearing technology, it should last a lifetime," says Grieve.

"The true science is by design, the filter can be cleaned several times due to the fact that at no time will more than 40-48 PSI be applied to the element. It works a lot better

than damaging the filter by banging it on the ground or holding an air nozzle 1/4-in. away from the filter with high pressure, which can tear the element."

The Air Filter Blaster portable unit sells for \$299 plus S&H and comes with a 6-in. rotor head standard - 3, 4 1/2 and 9-in. rotor heads are also available to fit almost any filter on the market and sell for \$49 each.

### GREAT NEW SAFETY FEATURE

## Introduction of the Rotor Disc Guard

You've asked and we've listened. As all of our customers already know, the Filter Blaster is designed to clean diesel engine air filters and other canister style filters not only effectively and efficiently, but most importantly safely. But as we all know, safety sometimes diminishes function. To ensure the best results for your valued customers, we designed a very simple solution to help avoid damaging not only your diesel engine air filter but also the Filter Blaster rotor head.

Effective immediately: All Filter Blaster Portable Units and Filter Blaster Rotors will be shipped with a corresponding Rotor Disc Guard. This Rotor Disc Guard is easily installed above the rotor and ensures your rotor will never touch the

inside of the filter which means no damage to the filter or the Filter Blaster rotor.

If you're already have a Filter Blaster, simply call our toll free 1-855-341-4677 and we will send you Rotor Disc Guards for any and all of your rotors at no charge to you.
