

Jensales: From Manuals to Engine Overhauls!

Jensales keeps adding more for their customers, because they love your tractor as much as you do!! Repurposing is a buzz word these days, from busses to houses and industrial buildings to apartments. Worn out vintage tractors are getting repurposed into low cost super reliable tools loved by the modern organic farmer and longtime farmers alike. Decals, sheet metal, engine overhaul kits, clutches, seats and cab interiors. With over a half a million items featured on their newly revamped website they are becoming the Amazon for tractor lovers!

Manuals were the start and it has grown from there. Order online or by phone, you still have your choice of old school paper or downloading the pdf manual. The number and diversity of parts continues to grow by the day! The emphasis is still engine kits, seats, cab interiors, clutches, water pumps, gauges, and decals. Still the best place to get the parts you need, even better than old Bubba at the local parts store because the manuals they have for nearly every tractor ever made helps them find the parts fast and ensures you get the right parts the first time.

Using service, parts, and operator's manuals to tie it all together, the over 500,000 parts now offered for all your repair and restoration needs is how they help you complete the job. The website (www.jensales.com) and the storefront in Manchester, MN, are ready to serve.

Jensales' high quality reproductions are of the Original Equipment Manufacturer

(OEM) manuals used when the tractor was new. An Operator's, Service, or Parts manual for your equipment clearly shows the right way to do any job. Get the parts, but don't forget the manuals and you will have what you need to do the job right.

They even have ways to save every day! Jensales' deluxe tractor manual kits include all the manuals for your tractor plus a few bonus items like a custom shop rag, serial number reference guide, and even a proper brand decal for your tool box is the way to go. Want it all? Get the electronic versions too! With discounts of up to 40% when purchasing both paper and digital versions, Jensales has you covered. Don't see a kit for your make or model? Just email or call them

and they will create one for you. Jensales is fast becoming the one stop shop for information and the right parts the first time.

Search the catalog and check out the free research tools on the Jensales website, or if you have questions their friendly staff are always ready to help by chat or on their toll free line. Be sure to visit the Jensales' World Headquarters in Manchester, Minnesota; they would love to see you, and if you mention this article you will receive a free gift!

Hand Grip Helps Pull-Start Small Engines

Anyone with severe arthritis who has trouble gripping a pull-start handle will be interested in this new device that eliminates the need for a tight hand grip.

The patented GripStart device works with virtually any size or style pull-start engine handle. It can be used on everything from lawn mowers to weed whackers, chainsaws, leaf blowers, generators, and so forth.

The unit's neoprene and nylon strap secures around your wrist, and an ergonomic metal hook rests directly in the center of your palm. The middle part of the hook has a slot in it for the rope, with room for a finger on each side. As you grab the handle with your fingers, it automatically slides into place across the hook.

"The hook grasps the handle tight, so the only strength you need to start the engine is coming from your arm," say co-inventors Chris Orsulak and Tom Coakley. "You don't have to worry that the handle will slip through your fingers if your grip gives out.

GripStart's nylon strap secures around your wrist, while a metal hook rests in your palm. The hook has a slot in it for the rope, with room for a finger on each side.

Once the engine is running, you just slip your hand and the GripStart away from the handle."

GripStart sells for \$29.99 with free shipping.
