## Tarnish Magnet Cleans Silver "On Contact"

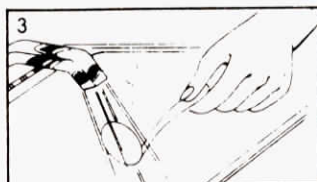

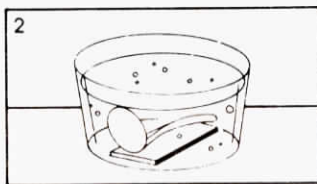

"Replaces a whole shelf of dangerous chemicals and messy paste cleaners and is 100% safe," says the manufacturer of the Tarnish Magnet, an automatic tarnish remover that doesn't require any scrubbing or rubbing.

"It really works," says FARM SHOW Office Manager Joan Johnson who tested the new product. "I cleaned a number of badly tarnished pieces of silver with it," says Joan, "and found that although there was a little hand work left after treating them with the magnet, it removed almost all the tarnish in less than a minute."

According to the company, here's how the magnet works:

You simply dissolve  $\frac{1}{4}$  cup of rock salt in one quart of hot tap water in a plastic bowl or pan. Set the magnet in the bottom of the pan and place the tarnished items on top of it. Some portion of the tarnished silver item must touch the magnet. Instantly, the tarnish slips off the items, whether they're large, small or medium-sized. Then, you simply rinse in hot water and wipe them dry.

The specially treated magnet is designed to work also on gold, diamonds and other jewelry or household items. It never wears out and is said to leave an invisible protective coating that retards tarnish, keeping items tarnish-free longer.

All you need to remove tarnish is the Tarnish Magnet, salt and hot water.

The magnet sells for \$12.95.

## Boot Cleaner, Sanitizer

Unlike a flat pan or tray you step into, the new Sani-Boot cleaner-sanitizer from Wulf Development Co. is easy to keep clean. It fills with fresh water and disinfectant each time it's used and can be heated for freeze-proof operation during winter months.

The washer is a Wulf "swinger" type cattle waterer equipped with an inside scraper and two brushes. To clean it, you pull a pin and lift either end of the pan. It swings up to quickly and completely empty in a couple seconds. Disinfectant is metered into the washer via a companion medicating canister.

Selling price for the unit, just going into production, is expected to be in the neighborhood of \$250 for both the washer and medicator. It ties into a pressure water line or can be hooked to a water tank.

Contact: FARM SHOW Followup, Sani-Boot, Wulf Development Co., Box 267, Cheney, Kan. 67025 (ph 316 542-3558).

Designed for use at the house or barn, the washer disinfects as well as cleans.

**New Products Especially For Women And The Farm, Ranch Home.**

The handy light, powered by batteries or from an electrical outlet, clips on books so you can read in bed, while camping or while riding in the car.

**READ IN BED WITHOUT WAKING YOUR SPOUSE**

## "Itty Bitty" Light For Night Readers

You can read in bed at night without waking your spouse with the new "Itty Bitty" light from Zelco Industries.

The light, which can also be used for night reading while traveling in a car, is made from a lightweight plastic and clips right to the cover of the hard or soft-cover book you're reading.

It adjusts to three different positions so you can place the light as

close or far from the book as desired. Since the light can be powered by batteries or from an electrical outlet, you can use it anywhere.

Sells for \$30, plus postage.
