

“Add-A-Valve”

The V&M Add-A-Valve plumbs into your tractor’s existing hydraulic remote outlets. Now you have two outlets with a 15 gpm flow at a very low price.

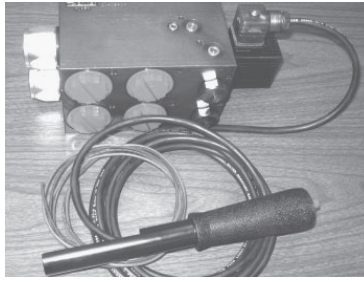

The V&M Add-A-Valve can be mounted on your tractor or implement. You can “quick connect” to your tractor’s remote hydraulic outlets if they are strong enough to support the extra weight - 5/16-in. holes are predrilled in the valve body for easy mounting.

The V&M Add-A-Valve control grip is mounted on your hydraulic remote lever for easy operation. The handle is moved to direct flow on your primary outlet, or depress a button and direct flow of a secondary outlet.

The V&M Add-A-Valve works well for almost any hydraulic use. One-way Add-A-Valve’s are also available with or without couplers. Takes just 30 min. to install.

Contact: V&M Inc., 300 E. 40th St. N., Sioux Falls, S. Dak. 57104-0701 (ph 800 648-6507 or 605 332-4335; www.vandminc.com).

Super Add-A-Valve

V&M announces a new version of the Super Add-A-Valve.

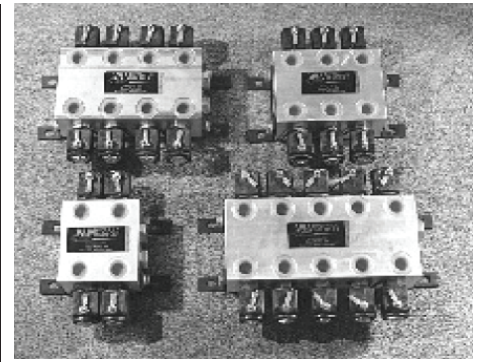

It flows up to 45 GPM and, with versions that take up to 5000 PSI, you can add extra functions to even more equipment. You don’t have to have 40 GPM to work, though. The Super Add-A-Valve plumbs in between your hydraulic valve and cylinder to add an extra function to almost any system.

Grapple Forks, thumbs, and buckets are among the more common uses for this valve.

The Add-A-Valve is easy to use. The control clamps to the lever you move in the cab. The “added” function works when you press a button down while moving the lever. The button is rated at up to 1 million cycles for long life.

SV Series Valves

The SV Series is a 6 to 8 gpm valve. It is available in a 2 through 8 bank valve. It works great for sprayers, hay equipment, blades, etc. The standard SV valve is designed with a check valve to keep your cylinder(s) from moving - even if your tractor’s remote valve leaks.

The control handle mounts on your remote lever for easy one-handed control. The SV Series valve works on any tractor that has an existing hydraulic remote valve.

V&M also makes other valves with flows up to 40 gpm. If you have a need for extra outlets give V&M a call.

LEAKING OIL?

SealLube Positively Stops Existing Leaks In Any Fluid System:

Gasoline engines, diesel engines, farm tractors, marine engines, hydraulic systems, manual transmissions, automatic transmissions, power steering units, rack and pinion, jacks, heavy equipment, differentials, refillable shock absorbers, gear cases, I/O drives, PTO valves and air conditioners. Every bottle is **GUARANTEED** to work or your money back!

SealLube quickly revitalizes hard, shrunken, leaking rubber seals to original condition. It can also be added to any system to help prevent future leaks by conditioning all seals. One 8 oz. bottle treats up to 8 quarts of oil / fluid. Compatible with all manufacturers’ fluids. Does not contain petroleum distillates, which can harm or destroy seals after temporarily expanding them, and is 100% non-clogging. Also available in cases and gallons. **Proudly made in the USA!**
