

Battery Operated Or 110V Powered Mini Milker Great For Small-Time Dairying/Homesteading

"I have been using the Ultimate Ez Electric Milker with the bottles milking from 45 down to 20 does daily without experiencing any problems or negative effects for seven years. We recently added the Stainless Steel 2.6 gallon Bucket so we can milk six at a time. We highly recommend this piece of milking equipment, and best of all it's made in the U.S.A. It's fast, safe, easy to clean with outstanding Customer Service"

Shery Goodman, Sunspring Ranch, Provo, Utah.

Buck Wheeler has upgraded his Udderly Ez Hand and Ultimate Ez Milkers again. His new patented Ultimate Ez Milker uses an electric pump to milk one to four teats at a time and works on cows, goats, sheep, camels, and horses.

The new milker is powered by an aspirator vacuum pump with a regulator and gauge with arrows on the dial to preset proper vacuum for the animals it's being used on (see instruction and video). The pulsation is produced by the animals heart beating.

"After starting out with our Udderly Ez Hand Milker in 2004, we moved to our two bottle, followed by the 4-bottle milker.

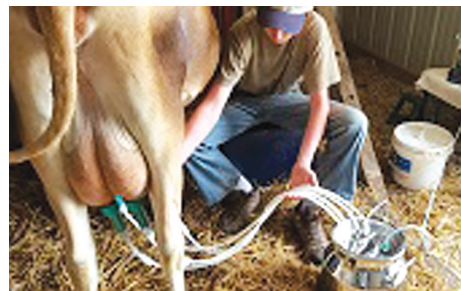

We then added the 2.6-gal. SS Bucket and now the 5-gal. SS Bucket," says Wheeler. "Most cows are milked between 7 and 8 mins. You can now milk two cows at once using one motor and two buckets. We even have a new air vacuum unit that is operated off an air compressor. You can read the complete story and Q&A on our website (<https://udderlyez.com/ez-milker-retrieves-colostrum-or-treats-mastitis/>)."

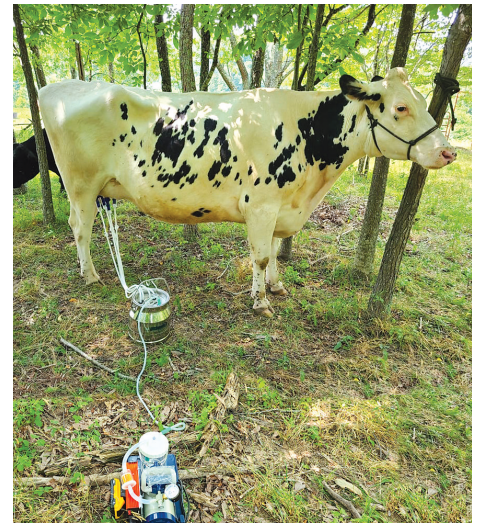

Electric milker prices start at \$599. They can now milk one or four teats at once, one cow, or two goats or sheep at the same time. "We now have three sizes of color coded silicone inflations with clear inflation

shells so you can see the milk being drawn," says Wheeler. Bucket milkers come with four small and four medium inflations; if large are needed you may order them at time of purchase.

Also available as an accessory option is a 300-watt inverter that slides under the pump and is attached to the pump plate.

You're able to milk anytime, anywhere. People without electricity in their barn can use batteries from their own 20 & 18-volt DeWalt, Milwaukee, or Makita hand tools. It's totally portable. Customers appreciate that the cost is about a third of the commercial milkers, plus it's quiet,

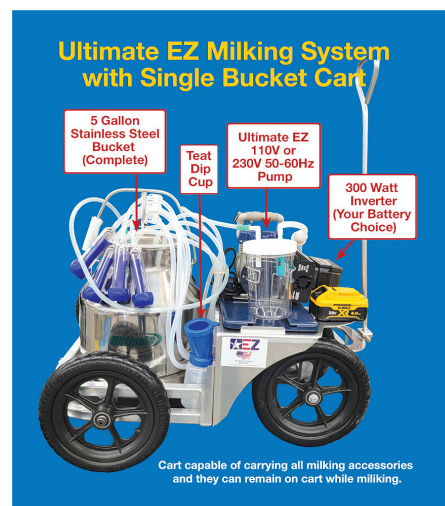

lightweight, and under 12 mins. cleanup time (see cleanup video on website).

The pump comes with a 2 yr. warranty and 6 mos. on the parts, a DVD, and instructions. All parts are made in the U.S.A. Several videos on Wheeler's website show how to set up, clean, and troubleshoot. Call for free qualifying shipping details.

Cart capable of carrying all milking accessories and they can remain on cart while milking.

Cart capable of carrying all milking accessories and they can remain on cart while milking.

"By popular demand, we now offer two sizes of carts specifically designed for use with our Ultimate Ez Milkers, and you can leave the buckets in the carts while milking. They're light and very maneuverable, fully self-contained," says Wheeler. He notes that the carts don't include buckets or milking accessories.
