

# Automatic Chicken Door And Coop Light

Two engineers who are friends teamed up to create an automatic chicken door and other poultry products. Tony, who is an electrical engineer, and Mark, who is a manufacturing engineer, got tired of feeding the local wildlife because they kept forgetting to close their coop doors at night.

After looking at wood sliding doors and doors that required massive assembly, they decided they could come up with something better. The Pullet-Shut door is based on a hinge door in your home, always reliable, and very low-maintenance.

The Pullet-Shut door is made of aluminum so it will not rust, warp, or rot. The door is hinged on brass pivots and has stainless steel hardware. It has no switches that can fail. It's programmed to open and close with a magnetic sensor.

The door is programmable, but you can also choose the option to have a photo sensor installed which will open at dawn and close at dark each day. Other options offered are 12-volt batteries with solar or plug-in charging systems.

As a safety feature, if a chicken is outside when the door closes the door will open a second time and give the last bird one last chance to get into the coop before it closes

for the night.

The doors are built in Lockhart, Texas. They start at \$180 plus shipping. Don't forget to check out the options and the other size doors. They make 3 sizes—a large door (for turkeys), a medium door (for chickens), and a small chicken door (for small coops).

Contact: FARM SHOW Followup, Nopec LLC, 3722 Old Kelley Rd. (ph 512- 995-0058; www.chickendoors.com).

This kit will allow you to have a light in your coop that you can turn on any time or use the built-in timer to give the hens extra hours of daylight to keep them laying into the fall. Includes a 3-watt high-efficient LED light and a controller. You can add the 15-watt solar panel (shown in the background).

**Dodge Track Bar, Tie Rod End Kit 1994-2007.5**

**Dodge Track Bar Bushing Kit 2003-2007.5**

To owners of Dodge Ram trucks from 1994 to 2007.5: Do you have play, wandering or a violent shake when hitting a bump (some call it a "death wobble")? Then Luke's Link is your solution. Luke's Link was developed to permanently solve these problems. Track bar and tie rod ends are the number one cause of the wandering or shake. Luke's Link converts the ball stud end of these bars to a fully adjustable end. No need to keep buying expensive bars that don't last when all you need is the ball joint ends.

These kits are fully adjustable, easy to install, and guaranteed for the life of the truck. Luke's Link has been solving steering problems for 28 years.

Luke's Link products work on Dodge tie rod ends and track bars as well as Ford tie rod ends and Jeep track bars.

### How To Check If Track Bar Or Tie Rod Ends Are Worn

With truck on ground, wheels straight ahead, unlock steering wheel (do not start engine). Have someone rock steering wheel left and right hard while you look at each end of track bar as well as all 4 tie rod ends for any up and down movement. If there is any, you know this is causing play in the steering.
