

NEW "NECK SAVER" SNOW BLOWERS

Two-way blower has 3 pt. hitch on both the front and rear.

Two-Way Plow Mounts In Rear

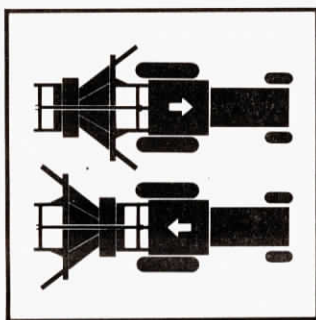

This first-of-its-kind snow blower from Northeast Implement Corp., of Spencer, N.Y., has a 3 pt. hitch mounted on both ends, allowing it to be both pulled and pushed.

Pulling the rear-mounted unit allows you to drive the tractor forward, thus eliminating the need to have to twist your neck to keep looking back. In unusually deep snow (over 3 ft.), the unit can be reversed and hooked up in the "push" or backup position.

"Farmer owners tell us they seldom operate the unit in the backward or push configuration, even in deep snow," explains the manufacturer. "If the snow is unusually deep, they prefer to make two passes with the unit in the pull or forward position rather than have to drive the tractor backwards."

A feeding system which moves snow toward the rotor is built in to prevent plugging in heavy, wet snow. The feeding propellers and the rotor are flail type to prevent damage to the machine when rocks or other solid objects get into the machine.

Snow can be blown to either side,

or to both sides of the blower at one time. Discharge direction is controlled from the driver's seat. The blower glides on the ground on runners, which can be adjusted for "clean shaves", or for some clearance where necessary.

Fits on any tractor with Cat. I or II hitch. Cuts an 80 in. wide swath, weighs 750 lbs. and retails for \$1,300. A 98 in. wide model sells for \$1,420.

Hookup allows front-mounted blower to be raised and lowered hydraulically.

PTO Extender Permits Up-Front Mounting

Who says you can't drive your tractor forward even though it's equipped with a pto-driven blower designed for rear mounting?

Here's one way to do it — with a unique pto-extender kit manufactured by Ber-Vac Inc., of Thetford-Mines, Quebec, Canada. It consists of a gear box to reverse rotation, and two pto shafts. The heavy duty, under-slung frame adapts to 2 or 4 wheel drive tractors. The special hookup allows the front mounted blower to be raised and lowered hydraulically. Takes one man only a few minutes to mount or dismount the pto extender frame, says the manufacturer.

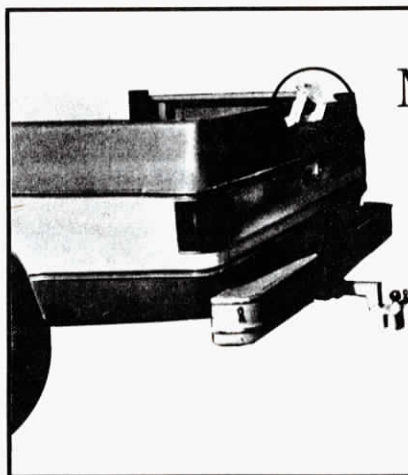

Three models, depending on tractor size, are available for tractors from 35 hp and up. Since the snow blower itself doesn't have to be modified for the front mounted hookup, it can be operated in the conventional rear-

mount position whenever desired. Although designed for use with Ber-Vac's line of snow blowers, the pto-extender frame for "go forward" front mounting will readily adapt to other makes of snow blowers designed for 3 pt. hitch rear mounting.

In addition to snow blowers, the pto extender and front 3 pt. hitch could possibly be adapted for front mounting other pto-driven equipment.

Mirror Makes for Easier Hookups

"Easy hookups every time" are promised with the new Bac-Site mirror for pickups, campers or motor homes. The driver simply looks through the rear view mirror which picks up the view from the Bac-Site mirror.

"This new mirror eliminates the need for a second party in hooking the towing vehicle to a trailer, camper, wagon or whatever is being towed by the pickup. For pickups

with a camper mounted behind, Bac-Site is mounted high so as to be visible through the pickup's rear-view mirror and the window of the camper entry door. Folds up and out of the way when not in use.

Sells for \$29.95.
