MAKES DITCHES UP TO 10 FT. WIDE IN A SINGLE PASS AND THROWS SOIL 120 FT.

“Giant Wheel” Rotary Ditcher

By Bill Gergen, Associate Editor

“People can’t believe their eyes when they see our new 3-pt. rotary ditcher that makes ditches up to 10 ft. wide in a single pass. It shapes both sides of the ditch and throws dirt out up to 120 ft. away, spreading it evenly,” says manufacturer Junior Liebrecht, Continental, Ohio, about the new Liebrecht Ditcher.

The pto-operated ditcher consists of an 8-ft. dia. steel wheel fitted with 8 bolt-on digger buckets and a replaceable steel wear band inside the wheel housing. Soil is scooped up and then carried 180 degrees to the top of the wheel, then thrown out of a hood at the top. A hydraulic cylinder is used to direct the hood’s deflector up or down or forward or backward to direct the flow. A pair of hydraulic-controlled blades, one on each side of the ditcher, can be adjusted up or down to control the side slope of the ditch.

“It’s bigger than any other ditcher on the market,” says Liebrecht. “By lowering the side-mounted blades you can cut a shallow ditch as wide as 10 ft. wide in a single pass. By making several passes you can make ditches of any depth or width.

(Continued on page 26)

Junior Liebrecht's new ditcher consists of an 8-ft. dia. wheel that mounts on a tractor 3-pt. It flings dirt out as far as 120 ft. or it can dump dirt right alongside ditch.
