

"GO ANYWHERE" TRACTION BOOSTER MAKES FUN OUT OF SNOW REMOVAL

ATV Tracks Plow Through Mud, Snow

With new "Add-A-Tracs" on your ATV three or four-wheeler, you'll get cat-like traction to plow through snow and swampland that other machines, even 4-wheel drives, can't handle, according to the manufacturer.

Add-A-Trac consists of a track with case-hardened cleats, a 23 by 41-in. carrier, a pair of 8 by 23-in. idler wheel and tire assemblies, an air shock and a hitch.

Mounting consists of attaching a mounting plate to the back of your ATV. Add-A-Trac attaches to the plate with three pins. A track is then placed around reach of the ATV rear tires. The back add-on tires slip in-

side the tracks. When the add-on tires are inflated they tighten the tracks.

"With an Add-A-Trac and a large plow on the front, snow removal is fun and easy," the manufacturer points out. "The track doesn't detract from steering ability of the machine and is quickly and easily removed by pulling three pins and deflating the idler wheels."

Add-A-Trac is available for most large model 3 and 4 wheel ATV's. Sells for \$995.

For more information, contact: FARM SHOW Followup, Cambridge Metal and Plastics, 200 South Cleveland, Cambridge, Minn. 55088 (ph 612 689-4800).

Tracks wrap around rear wheels and add-on bogey wheel.

PROVIDES ROLLOVER AND COLD WEATHER PROTECTION

Tractor-Type Cab For 4-Wheel ATV's

New from Specialty Products is a tractor-type cab for 4-wheel ATV's that protects from cold weather and blowing snow as you check cattle and do other chores.

The "Winter Cover" cab is made of a rigid plastic-nylon material that's rustproof and strong enough to withstand rollovers. It weighs 42-lbs. and fastens to the ATV at the front, back and on the each side. It has two removable doors — fitted with unbreakable lexan windows — so you can leave the cover on in summer and still get good air circulation.

A protector plate fits over the engine to channel engine fumes and odors away from the driver.

Orange-colored "Winter Covers" are available to fit Suzuki 125, 185 and 250 machines, Honda 250's and most other 4-wheel models.

Roomy cab is fitted with large, non-breakable windrows.

They sell for \$625.

For more information, contact: FARM SHOW Followup, Louis Niday, Specialty Products Sales Inc., Box 503, Humeston, Iowa 50123 (ph 515 774-2010 or 877-3141).

Add-on front axle assembly simply bolts into place with no welding or cutting.

4-Wheel Conversion Kit For 3-Wheel ATV's

"We built three different prototypes before we got it right," says Chuck Moritz, Sutton, Neb., who's developed a new conversion kit that makes 4-wheelers out of 3-wheelers.

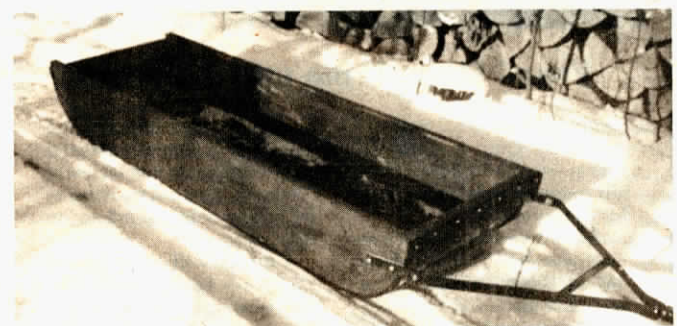

"ATV's are much safer when they've got 4 wheels and you'll spend a lot less by converting than if you buy a new machine," notes Moritz.

The conversion kit consists of a front wheel assembly that comes with or without a carrying platform. The bolt-on front assembly can be installed with just simple hand tools

and requires just three bolts. The two add-on front wheels are smaller than the conventional rear wheels.

Once converted, the 3-wheeler weighs just 40 to 45 lbs. more. The kit, available for Honda 110's and 90's, sells for \$389. Moritz plans to have kits available for other Honda models, as well as Suzukis and Yamahas in the near future.

HAULS FEED, FIREWOOD, SUPPLIES

All-Purpose Sled For ATV's, Snowmobiles

"It works great for hauling firewood, feed and other supplies behind your ATV or snowmobile," says Lorne Lantz, Wellesley, Ont., inventor of a new, all-purpose winter sled. With side racks, it can be used to haul calves.

The lightweight, non-tipping snow sled weighs 110 lbs., has a 600-lb. capacity and is 32-in. wide, 12-in. high and 7-ft. long. The bottom and runners are made of a high density plastic that withstands even the coldest temperatures, says Lantz.
