

HANDLES PIGS UP TO 70 LBS.

One-Person Pig Holder

Any man, woman or teenager working alone can handle pigs from 3 days of age up to 70 lbs., says Delphi Products of the company's new Farmcraft one-person pig holder.

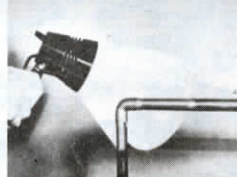

The holder comes with an adjustable stabilizer bar and fastens without any tools to almost anything — the side or end of a farrowing crate, work table, partition or whatever. A restraining strap prevents squirming pigs from working loose. Fingers

which hold the pigs' legs are made of steel rods bent into shape. There are no moving parts to wear out and all metal parts are cadmium plated. Said to save time and labor for castration, clipping tails, inoculation, ear notching, iron shots or vaccination.

For more details, contact: FARM SHOW Followup, Delphi Products Co., Box 256, Delphi, Ind. 46923 (ph. 317 564-3752).

Instantly thaws out frozen pipes.

For sweating copper tubing or water pipes.

Softens tile for easy laying on irregular concrete floors.

Zaps paint off house siding, furniture.

Strips an entire boat faster, easier than any other way.

USE IT TO PEEL PAINT, THAW FROZEN PIPES, WARM ENGINES, SWEAT COPPER FITTINGS

New Blowtorch Is Flameless

A flameless blowtorch that shoots out a powerful halogen beam at temperatures ranging from 300 to 1125° is new from the John Sturges House, Westport, Conn.

Called the Torchlight, it can be used to peel paint, thaw frozen pipes, or to warm cold engines. Other possible uses include using it to soften

putty when reglazing windows, or for sweating copper tubing and fittings.

Cost, complete with 75 hr. replaceable lamp, is \$34.95.

For more details, contact: FARM SHOW Followup, The John Sturges House, 49 Riverside Ave., Westport, Conn. 06880 (ph. 203 227-7216).

Holder can be fastened to farrowing crate, feed cart, or most anyplace.

Cattle or other livestock simply nose the Solar Rancher out of the way to drink. It absorbs heat from the sun during the day and conserves that heat at night with dead air insulation.

COLLECTS SUN'S HEAT AND TRANSFERS IT TO THE WATER

Solar Heated Tank Heater

"We've found it to be of great help to cattlemen trying to maintain ice-free drinking water for livestock," reports Dick Carmack, sales manager for U.S. Solar Pillow, manufacturer of the new Solar Rancher.

The inflatable plastic bag is designed to collect the sun's heat and transfer it to the water. "The clear vinyl top admits radiation from the sun, traps it in the black bottom, then transfers it by conduction to the water," explains Carmack. "If a crust of ice forms in the night, the Solar Rancher will usually melt it within an hour or two after sunup. On the

average, it adds over 700 btu's per square ft. per day to your watering tank.

"At zero degrees, there usually is ice-free water under the Solar Rancher," explains Carmack. "When the temperature falls to 20 or 30 below, however, it won't do the complete job."

The Solar Rancher measures 25 in. by 54 in. deflated. Sells for \$14.95.
