HOLDS HIGH MOISTURE CORN WITHOUT SPOILING

The 'Cornmobile': A Silo On Wheels

By Mark Jacobs,
Associate Editor

One of the best "spoilage-proof" ideas we've seen for holding and handling high moisture corn from an oxygen-limiting silo is the "Cornmobile", developed by Tom Manning, Dover, Minn.

This "silo on wheels" allows you to haul and store up to 100 bu. of rolled or whole kernel corn for up to 30 days while feeding it to livestock.

"It's great for the farmer who wants to feed high moisture corn to livestock located several miles away from the silo," says Manning. "I've had farmers store 30% moisture feed in the Cornmobile up to 30 days during the hot days of August, as well as during the coldest days last winter, without any heating or freezing of the wet corn. I think it could safely store high-moisture feed even longer during months with moderate temperatures."

The Cornmobile stands 7 ft. high above the tandem axle trailer, is 5½ ft. wide and 8 ft. long. Manning says that some farmers have pulled the loaded Cornmobile down the road

(Continued on next page)

"The Cornmobile opens up an exciting new market for cash grain farmers who can use it to sell and deliver high moisture corn to area livestock and poultry producers," says Tom Manning, inventor.
