"IT'S AS ACCURATE AS A MAX-EMERGE"

You've Never Seen A Planter Like This!

By Mark Newhall, Editor

"It's as accurate as a Max-Emerge planter," says Barry Handy, Scobey, Mont., who's come up with a revolutionary new add-on planting system that gives pinpoint accuracy to chisel plow shanks used in conjunction with air seeders to plant everything from grass seed and small grains to corn and soybeans.

The add-on planter unit fits behind a plow shank and floats up and down on a spring-loaded depth control bar. No matter how deep the plow shank goes, or how uneven the ground, each individual planting unit maintains its predetermined depth. The planter unit also includes a 3-way manifold that'll deep-band dry, liquid or anhydrous fertilizer in parallel rows with the seed.

"It's much more accurate than any air seeder, double disk drill or hoe

(Continued on next page)

Air seeder equipped with new no-till precision-plant attachment, above, easily seeds through heavy wheat stubble. Close-up of attachment, below, shows how it bolts to back of chisel shank. Seed is dropped through sweep at rear.

IN THIS ISSUE: Ag World

- 3** Slick way to dry wet basements
- 4** Rumble seat for pickups
- 6** First "rock proof" disk
- 8** New way to fertilize corn
- 8** Boost your tractor's hydraulics
- 20** They plan to raffle their farm

- 21** Snowblower moves grain
- 23** New way to plant corn
- 26** How to cut machinery repair costs
- 32** Best and worst combines
- 35** Motorized shovel
- 36** First reversible tractor
