

ADDED CONTROL WITH EXTRA REACH

“Roll-Out” Bucket Fits Any Loader

“Gives you extra reach, more digging power and a unique loading and unloading angle for many applications, such as backfilling and backleveling,” says a sales representative for Tink Inc., Durham, Calif. about the new Tink “roll out” bucket, an independently operated bucket designed to fit any tractor loader, skid steer loader, or shovel loader.

The Tink bucket, which comes in 60 to 106 in. widths, mounts on its own frame, complete with two hydraulic cylinders. Its frame attaches where a standard bucket mounts normally on the tractor loader.

The new bucket gives several added feet for dumping into high-sided wagons or dumping to a wagon's center — eliminating two-sided loading. Also, the load angle of the bucket keeps front wheels on the ground, for better 4-wheel traction. Back-filling can be done without raising the lift arms.

Prices for the 1,000 lb. capacity models are in the \$1,700 range.

For more information, contact: FARM SHOW Followup, Tink, Inc., Rt. 2, Box 4, Durham, Calif. 95938 (ph 916 895-0897).

New-style bucket adds reach to a loader, as well as new angles for ground work.

The new Shortgate is especially handy with livestock racks, says the manufacturer.

GIVES YOU BETTER MILEAGE, LOADING CONVENIENCE

New “Shortgate” For Pickups

If you've ever crunched a tailgate hooking up a gooseneck or backing up to a livestock chute, you'll latch on quick to the new Johnson Shortgate from Johnson Industries, Soldier, Iowa.

The rugged Shortgate — it's 1/3 the size but weighs as much as a regular tailgate — not only avoids the bang-up problems that claim most truck gates, but, due to less air resistance, increases fuel economy.

“It's quick-tach so you can remove it in 10 sec. and replace your full-size gate, when needed,” says Dale Johnson, who designed the tailgate after smashing up tailgates in his own farming operation. “It's especially good for stock racks. With this 6-in. gate, there's no gap between the pickup and stock rack so animals can't escape. And, it's better than having no tailgate on at all because it stops animals from catching their feet in the space between the bumper and chute.”

The Shortgate, which comes with universal mountings for any full-

The 1/3-size tailgate is made from strong, 1/8-in. steel.

sized pickup, is made from 11 ga., 1/8 in. thick steel. “It rises 5 in. above the truck bed, high enough to keep tools and cargo in but low enough to make loading easier,” Johnson told FARM SHOW.

Cost for the Shortgate, which can be painted at extra cost to match your truck color, is \$79.95. A chrome model sells for \$169.95.

For more information, contact: FARM SHOW Followup, Johnson Industries, RR 1, Box 173, Soldier, Iowa 51572 (ph 712 884-2437).

PULLS WATER FROM TANKS, PONDS

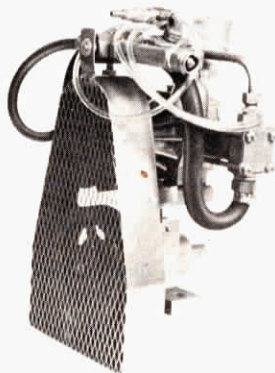

Pto-Powered Washer Mounts On Tractor

New from Specialty Equipment is a high-pressure washer that'll deliver up to 2,400 psi. It's fed by normal water pressure and mounts right on your tractor.

“It'll work on any tractor with a pto. Just hook it up to a garden hose, or drop the loose hose in a tank, pond or ditch,” says Larry Kirk, company manager. “Features a twist-grip handle that lets you vary pressure from 50 psi to maximum, running at a constant 4 gpm. No electricity or other power source is needed for self-priming pump.”

Detergents, chemicals or sand can be blasted through the special borocarbide wand. And, since additives are injected “downstream” of the pump, pump life is lengthened. Flow rate of added materials is controlled by adjusting pressure. None begins to flow until at least 700 lbs. pressure is reached.

Options include a polyethylene sand-blasting tank, a choice between 2400 and 1450 maximum psi, and either a simple on-off or pressure-adjustable wand.

The pto-powered washer can be used with a sandblasting attachment.

Both the 1450 and 2400 psi model washers sell for \$1,450.
