

The vertical roaster cooks birds evenly, from the inside out.

SPEEDS COOKING TIME 40%

Vertical Roaster: A New-Fangled Cooker

Latest in kitchen gadgets is a vertical roaster rack that stands chickens straight up in the oven. You simply plunk a chicken or other bird on the wire rack, then replace the center ring that goes on top. Put the whole thing in a baking pan to catch drips, add a little water and place in a pre-heated conventional oven to roast. There's a little perforated tray that fits over the top in which you can put butter or other basting material for automatic self-basting.

"By standing the bird in the oven, it cooks evenly all the way around," says Denis Spanek, inventor. "It speeds up normal cooking time by

about 40%. The tempered steel rack is designed to act as a heating element which cauterizes the inside of the bird and also traps the natural juices. The flavor is changed drastically because the natural juices are trapped in the bird from the searing. They have nothing to do but bubble in the meat, creating a tenderizing effect."

Suggested retail for the Vertical Roaster kit is \$16, including basting tray and 8 skewers.

NO WORRY ABOUT LEAKS OR DRIPS

Easy Way to Water Plants

Ever get tired of walking back and forth with a heavy, clumsy watering can to water your indoor house plants?

There's an easier way. Called Water Eze, it waters, mists and fertilizes your plants all in one drip-proof step.

The kit includes: A universal adapter which connects to your kitchen or bathroom faucet; a mister attachment; 50 ft. of clear vinyl hose; a special nozzle which allows root feeding without splashing, and a special valve control for "soft" water pressure.

Water temperature can easily be regulated at the tap. An optional fertilizer unit enables Water Ease to feed plants when watering. When a gallon of water flows over plant food tablets in the unit, a gallon of fertilizer will be available to the plants.

Suggested retail cost of the Water Eze kit is \$9.95.

For more details, contact: FARM SHOW Followup, Water Eze Products, 132 Newbold Court, London, Ontario, Canada N6E 1Z7 (ph 519 681-5070).

COMBINES OUTSTANDING FUEL ECONOMY WITH THE BEAUTY OF A FIREPLACE

Free-Standing Glass Fireplace

"It combines outstanding fuel economy with the beauty of a fireplace," says Terry Luscom about his company's new free-standing Glowmaster glass fireplace, one of the most attractive and functional wood burning units we've seen.

It sports stainless steel trim on the glass panels, form steel construction, finger-saving wood handles on the doors and dampers, and a handy 2 cu. ft. stainless steel oven.

"A key feature of this free standing fireplace is its controlled air flow. Air enters under the base and is channeled up two chutes that divert it into the burning chamber. There is a wall between the front exposed part of the fireplace and the back oven. To get out the flue, circulating air in the front of the fireplace must pass below the wall and up past the oven." "Making it hard for heated air to get out of the burning chamber is what makes the fireplace so efficient," Luscom points out.

The fireplace stands 32 in. high, 32 in. long, 22 in. wide and weighs about 140 lbs. Its legs are adjustable for easy leveling. Tempered 1/4 in. glass covers the top, sides and large front-opening door. Instead of grates, the firebox is lined with a coating of concrete (cement is shipped with the stove in a bag). A lever on the front controls the damper for both side air vents. The flat top provides cooking space.

Fireplace features stainless steel oven at rear.

The stainless steel oven, located in the back one-third of the fireplace, acts as a heat reclaimer as air passes through the back chamber and out the flue.

The Glowmaster sells for \$695, not including the flue. A model without the oven in back, or glass on top, sells for \$489. Both models carry a 12 mo. warranty.

For more details, contact: FARM SHOW Followup, Glowmaster, c/o Rubber Dynamics Corp., Box 108, Armstrong, Iowa 50514 (ph 712-864-3737).

Plant watering kit stretches from kitchen or bathroom faucet, to plants.
