## FOLDS TO REAR FOR TRANSPORT

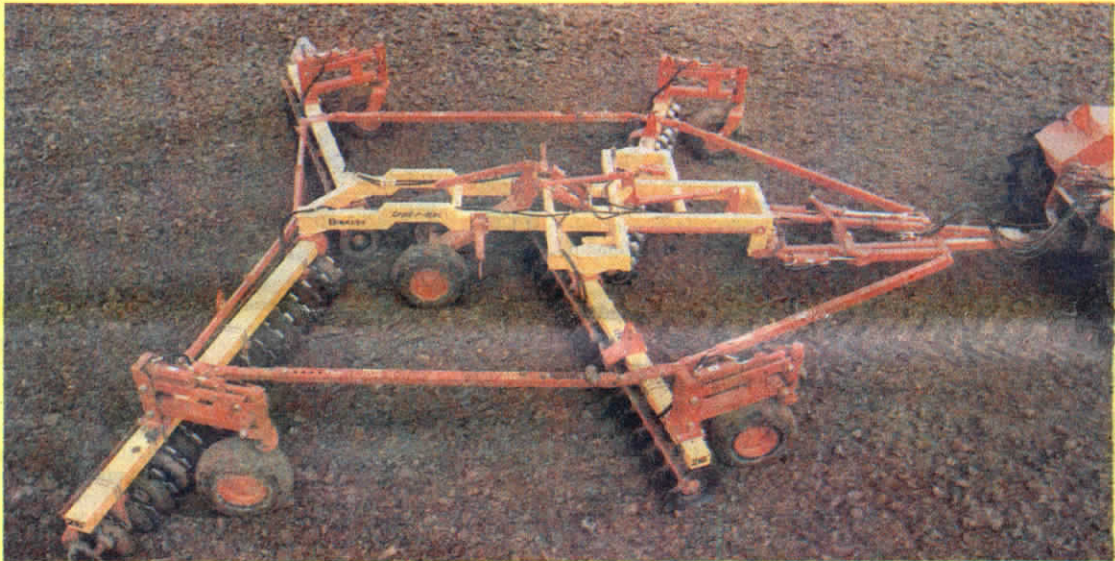

### First "Wingless" Disc Unveiled

You've never seen anything like it — a "wingless" disc that folds to the rear for transport.

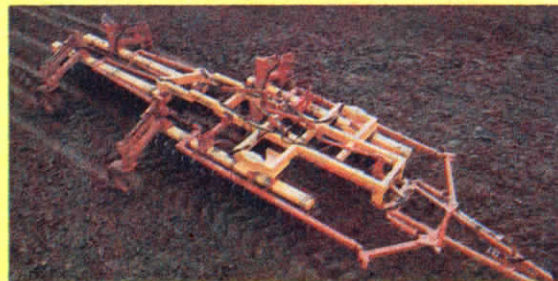

"It'll run circles around conventional wing-up discs," says Jay Wilbeck, sales manager of the Binkley Company, Warrenton, Mo., man-

ufacturer. "It works better in the field, is easier to adjust, and is much simpler and safer to transport. We think it's one of the biggest-ever breakthroughs in disc design."

(Continued on page 34)

Operator pulls "lockout" pins and drives forward to convert 45 ft. disk to transport (14½ ft. wide) position.

## IN THIS ISSUE:

- 2 100 MPG carburetors
- 3 "Easy Shift" for IH tractors
- 5 Driverless lawn mower steers itself
- 8 Home-built \$50 wick applicator
- 15 Sludge eliminator for manure pits
- 16 Parachutes make great grain pile covers
