

Rolling garden chair makes it easier to plant and harvest garden.

SIT RIGHT OVER ROW

“Sit-N-Pick” Your Way Through Garden Chores

Home gardener James Fish designed his 3-wheeled Sit-N-Pick garden chair to help harvest bush beans and peas while sitting down on the job. He also uses the new-style chair for planting and transplanting and for many other chores around the farm.

The chair features a tractor-style metal seat perched on a 14-ga. steel frame. The frame adjusts so you can straddle rows from 18 to 36-in. wide.

It rides on three 10-in. dia., 4-in. wide plastic wheels which, Fish says, roll easily through loose soil. The seat is 24-in. off ground and supports up to 250 lbs.

Fish is looking for a manufacturer and distributor.

For more information, contact: FARM SHOW Followup, James L. Fish, 1557 C.R. 995, Rt. 4, Ashland, Ohio 44805 (ph 419 289-2013).

Wagon weighs 70-lbs. and is built heavy for work or play.

“Lifetime” 4-Wheeler Built For Farm Kids

“It’s built to last several generations,” says Larry Miller, Belle Rive, Ill., who got tired of seeing his kids’ toys break apart after a short time of use. He built a “heavy duty” wagon that can be used for play or light hauling.

It’s fitted with tube tires mounted on wheels, each of which is fitted with ball bearings and a grease zerk. The axle is 3/4-in. hard steel. The front spindles are greaseable and it’ll make sharp turns with its car-type steering.

The bed is 24 by 42-in. “plyform”, a durable exterior plywood. The sides are made from oak and total weight is around 70 lbs. An optional adaptor for the handle turns it into a regular trailer hitch for use behind a riding mower or 3-wheeler. Sells for \$148.

For more information, contact: FARM SHOW Followup, Larry L. Miller, Rt. 1, Box 100, Belle Rive, Ill. 62810 (ph 618 736-2732).

New Products Especially For Women And The Farm, Ranch Home.

TAKES THE WEIGHT OFF YOUR KNEES

“Craftseat” Helps Take Pain Out of Kneeling

You can sit while you kneel so there’s less stress on your legs and hips and you’re more comfortable working with the new Craftseat.

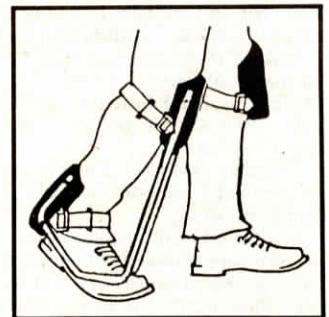

“Uses for the new Craftseat, which is made in Norway, are unlimited,” says Gordon McGuinty, president of Conmega Inc., North Bay, Ont., the Canadian distributor of the product. “We’ve had people tell us the Craftseat would work great when welding, doing shop work, working in gardens, as milking stools and when doing landscape and construction work. The design protects against pressure on the knee, allows better blood flow through the leg and by kneeling with it on, you give more support to your back, shoulder and neck.”

The 2 lb. Craftseat is designed by the same man who developed the Balans Chair (FARM SHOW Vol. 7 No. 4). The poles are made of extruded aluminum and the pads are made of a polyurethane which is soft enough to cushion the knee but firm enough to offer support.

There are two pads on each Craftseat. The first pad protects the knee when kneeling while the second pad, positioned on the back of the ankle, is the seat which you sit on. Craftseat straps onto your legs with wide straps that fasten just below your knee and around your ankle.

You can wear either one or two Craftseats. With their design, you can even leave them on when walking as they don’t affect your stride.

In Canada, Craftseat sells for \$59.95. For more information, contact: FARM SHOW Followup, Conmega Inc., Box 1426, North Bay, Ont.

Top drawing illustrates how knee rests on one pad while you sit on second pad attached to ankle. Lightweight Craftseat doesn’t affect your walking stride (lower drawing).

P1B 8K6 (ph 705 476-6292).

In the U.S. the Craftseat sells for \$30. For more information, contact: FARM SHOW Followup, Amcraft Inc. P.O. Box 3335, Idaho Springs, Col. 80452 (ph 303 567-4877).
