Look What They're Doing With Combines

"Deere 7720's Make Great Crop Sprayers"

A pair of working Deere 7720 combines equipped with homemade 80-ft. "wet-type" booms and front-mounted 500 gal. tanks make great crop sprayers for Wiley Juedeman, Geraldine, Mont.

Juedeman, who uses his combines to apply herbicides to fallow ground and standing

He Uses His Gleaner Combine To Mow Hay

"Combines sit around unused 90% of the time. I decided to find another use for mine," says Jeff Frey, Willow Street, Penn., who mounted two 6-ft., 7-in. wide Kuhn disc-type mower conditioners on the front of his 1984 Gleaner N6 combine.

Frey built a quick-attach frame that supports both of the 1988 model Kuhn mowers. Because the combine is built to support the weight of headers, he says it can easily handle the two heavy mowers. "It makes a great self-propelled mower-conditioner. The mowers cut a 13-ft. swath and lay the hay between the drive wheels. I can remove the mowers and be harvesting grain in less than an hour."

Combine Log Splitter

"I've never seen a splitter with the power and capacity of our home-built combine log splitter," says Tom Hewardine, Dewey, Ill., who converted a 1957 self-propelled Massey-Harris 92 combine into a powerful "go-anywhere" splitter.

Hewardine farms and also operates heavy excavating equipment along with his sons. They bring wood home by the truckloads, particularly tough Osage Orange hedge wood which Hewardine says is hard to split. "It's such a dense wood that it never rots and burns as hot as coal," he says.
